# CS 161: Fundamentals of Artificial Intelligence

Fall 2021 – Assignment 5

---

## Questions

This will be a non-coding homework. Please upload a digital copy of your solution on CCLE. Submitted files can be in either PDF or plain text. You may also submit a scanned PDF of a handwritten solution, but please ensure that the scanned file is *clearly legible*.

1. Consider the following sentences and decide for each whether it is valid, unsatisfiable, or neither:

- (a)  $(Smoke \Rightarrow Fire) \Rightarrow (\neg Smoke \Rightarrow \neg Fire)$
- (b)  $(Smoke \Rightarrow Fire) \Rightarrow ((Smoke \vee Heat) \Rightarrow Fire)$
- (c)  $((Smoke \wedge Heat) \Rightarrow Fire) \Leftrightarrow ((Smoke \Rightarrow Fire) \vee (Heat \Rightarrow Fire))$

Justify your answer using truth tables.

2. Consider the following:

*If the unicorn is mythical, then it is immortal, but if it is not mythical, then it is mortal and it is a mammal. If the unicorn is either immortal or a mammal, then it is horned. The unicorn is magical if it is horned.*

- (a) Represent the above information using a propositional logic knowledge base (a set of sentences in propositional logic). Make sure to clearly define all propositional symbols (variables) first.
- (b) Convert the knowledge base into CNF.
- (c) (i) Is it possible to derive from the knowledge base that the unicorn is **mythical**? (ii) How about **magical**? (iii) **Horned**? Justify your answers using resolution.

3. Consider the following:

An oil well may be drilled on Mr. Y's farm in Texas. Based on what has happened to similar farms, we judge the probability of only oil being present to be .5, the probability of only natural gas being present to be .2, and the probability of neither being present to be .3. Oil and gas never occur together. If oil is present, a geological test will give a positive result with probability .9; if natural gas is present, it will give a positive result with probability .3; and if neither are present, the test will be positive with probability .1.

Suppose the test comes back positive. What's the probability that oil is present?

## Submission

- Submit all solution files **on CCLE**.
- Submit your solution in a file **named hw5.pdf or hw5.txt**.
- By submitting this homework, you agree to the following honor code.

You are encouraged to work on your own in this class. If you get stuck, you may discuss the problem with up to two other students, **PROVIDED THAT YOU SUBMIT THEIR NAMES ALONG WITH YOUR ASSIGNMENT. ALL SOLUTIONS MUST BE WRITTEN UP INDEPENDENTLY, HOWEVER**. This means that you should never see another student's solution before submitting your own. You may always discuss any problem with me or the TAs. **YOU MAY NOT USE OLD SOLUTION SETS UNDER ANY CIRCUMSTANCES**. Making your solutions available to other students, **EVEN INADVERTENTLY** (e.g., by keeping backups on github), is aiding academic fraud, and will be treated as a violation of this honor code.

You are expected to subscribe to the highest standards of academic honesty. This means that every idea that is not your own must be explicitly credited to its author. Failure to do this constitutes plagiarism. Plagiarism includes using ideas, code, data, text, or analyses from any other students or individuals, or any sources other than the course notes, without crediting these sources by name. Any verbatim text that comes from another source must appear in quotes with the reference or citation immediately following. Academic dishonesty will not be tolerated in this class. Any student suspected of academic dishonesty will be reported to the Dean of Students. A typical penalty for a first plagiarism offense is suspension for one quarter. A second offense usually results in dismissal from the University of California.
